

Guidance for waste disposal

Disposing of various inappropriate materials down toilets and kitchen sinks can cause blockages within the drainage system.

This leads to pumping station breakdowns and premature pump failures, which can result in more serious issues such as flooding.

Please **do not** flush any items or products down your toilet except toilet paper. This includes the following:

Nappies & sanitary items

Baby, make up & household wipes

Cotton buds, cotton wool & dental floss

Kitchen roll

Food items

Many liquids **must not** be poured down the sink or into the toilet, as this will cause damage to the drainage system. This includes the following:

Grease & engine oil

Kitchen fat

Paint

Household chemicals

Garden chemicals

Please help prevent blockages and unwanted drainage problems by following this guidance.
